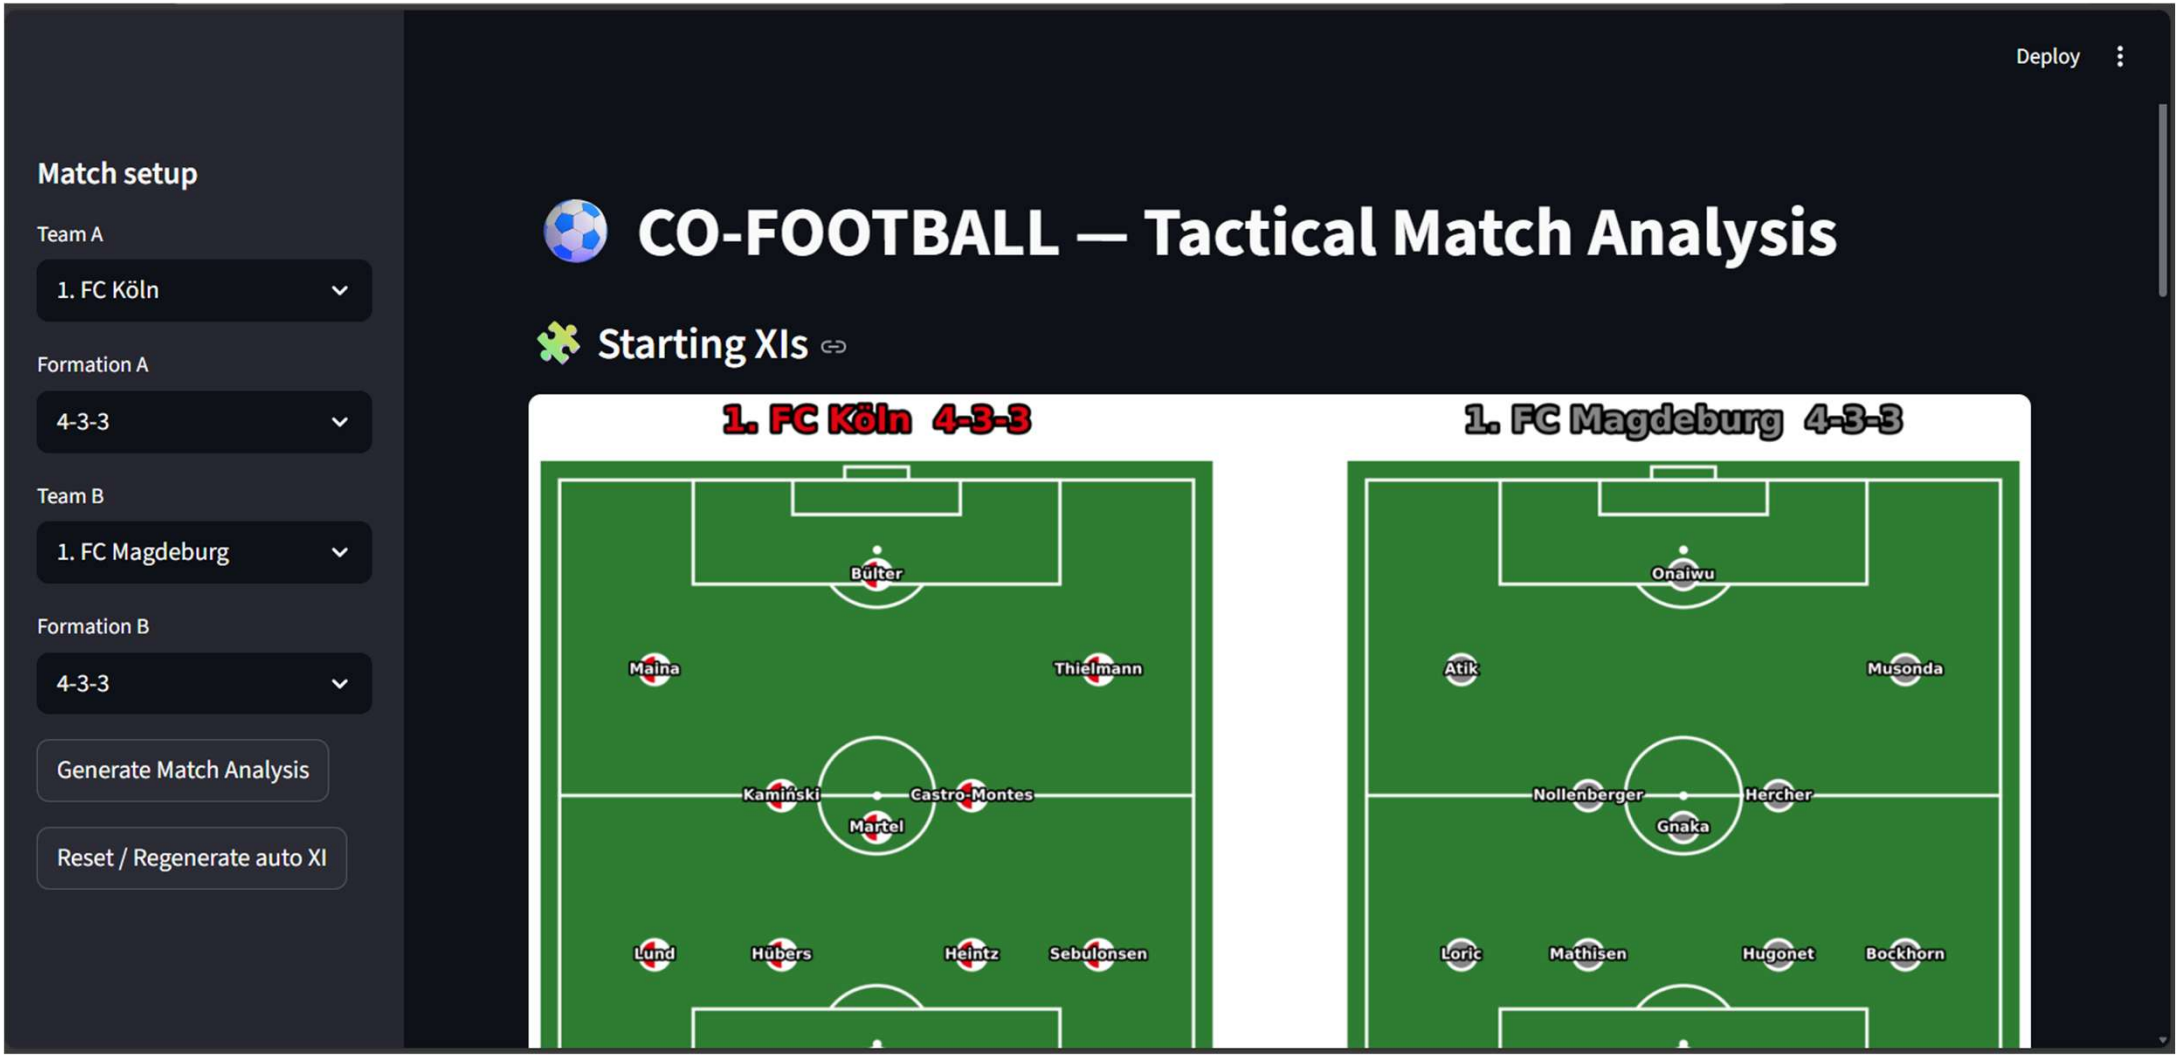
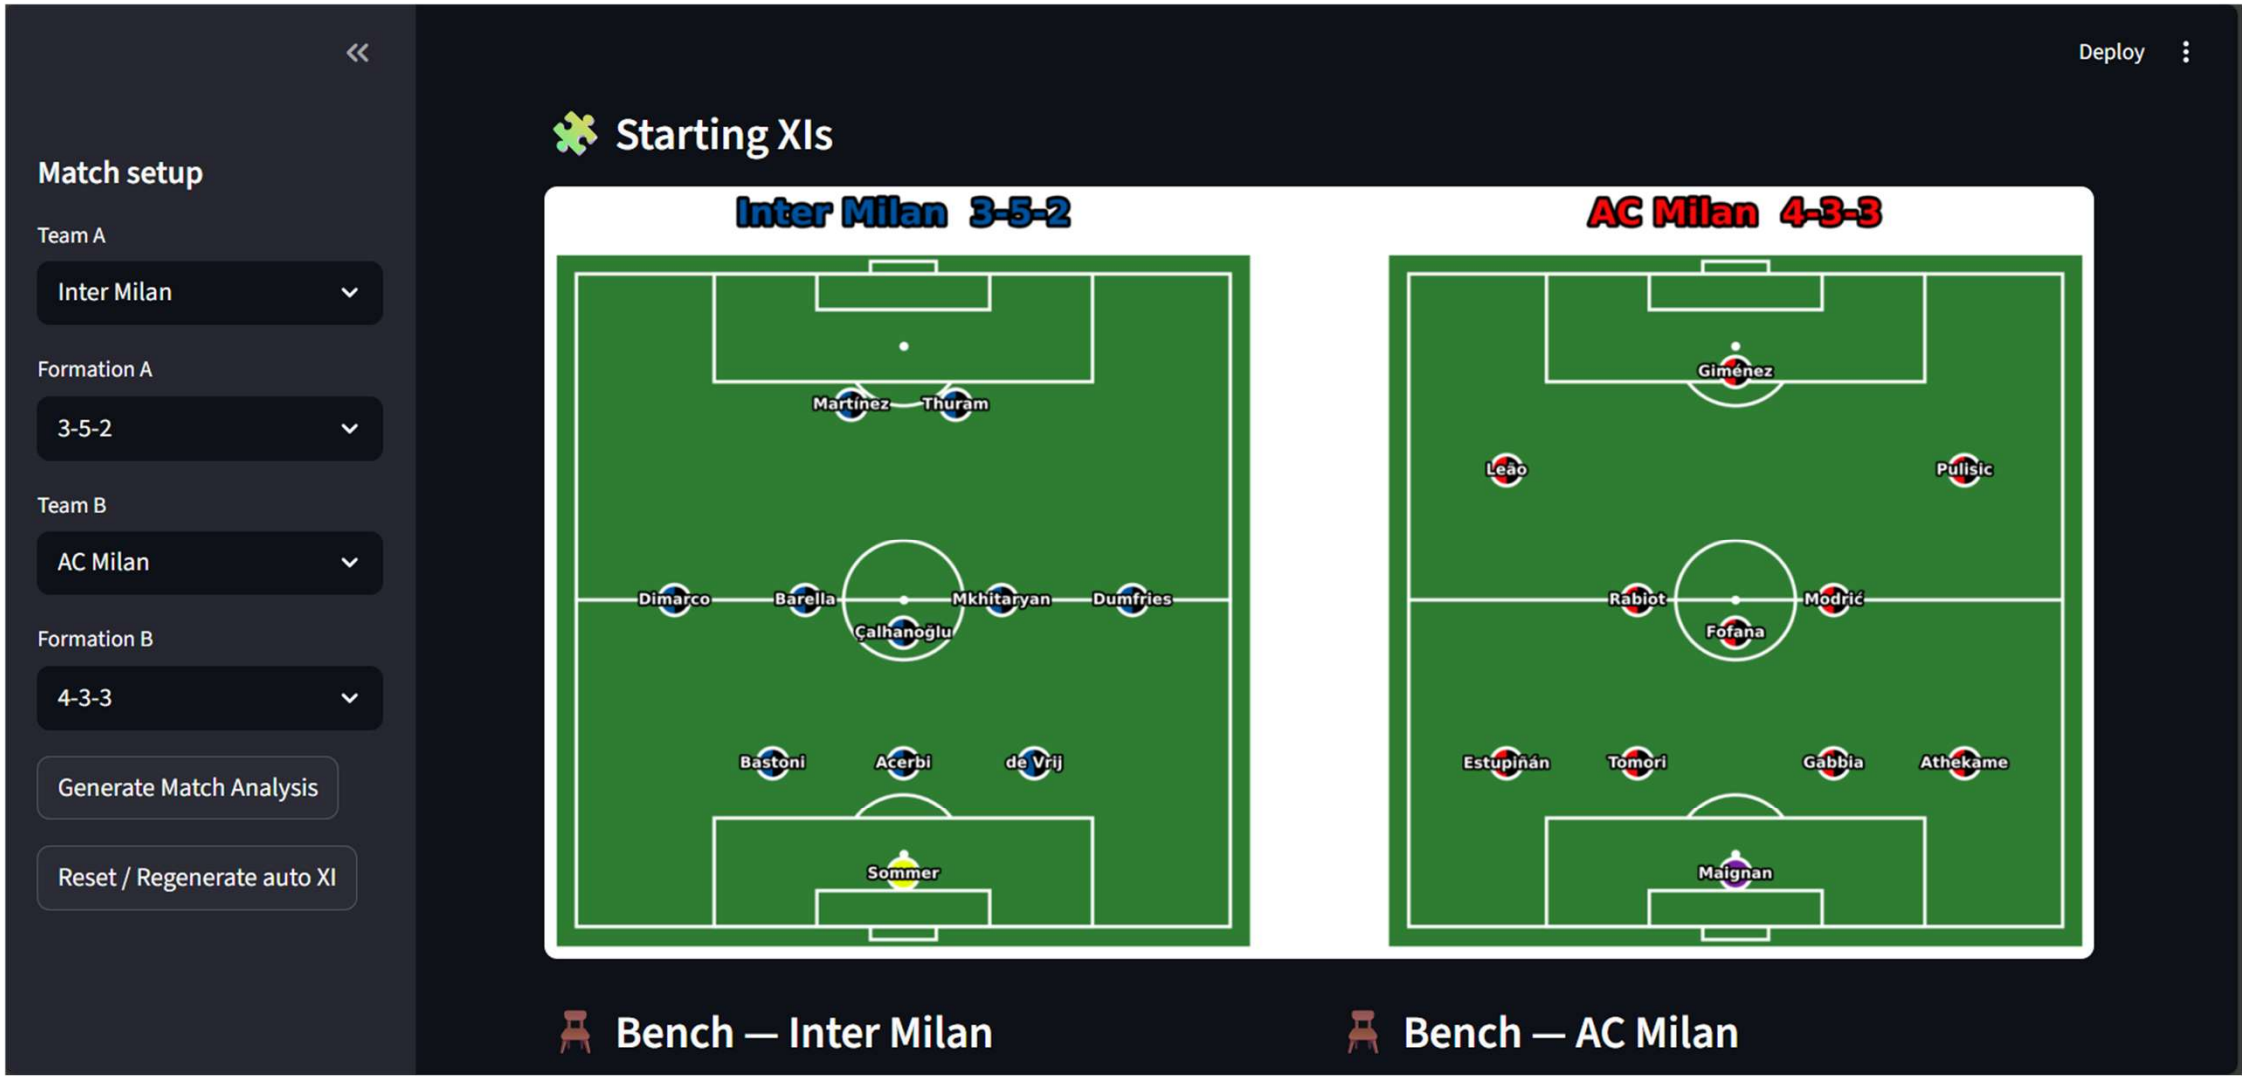
Screenshots of the system in a real-world usage scenario

Initial interface layout displayed when launching the application.

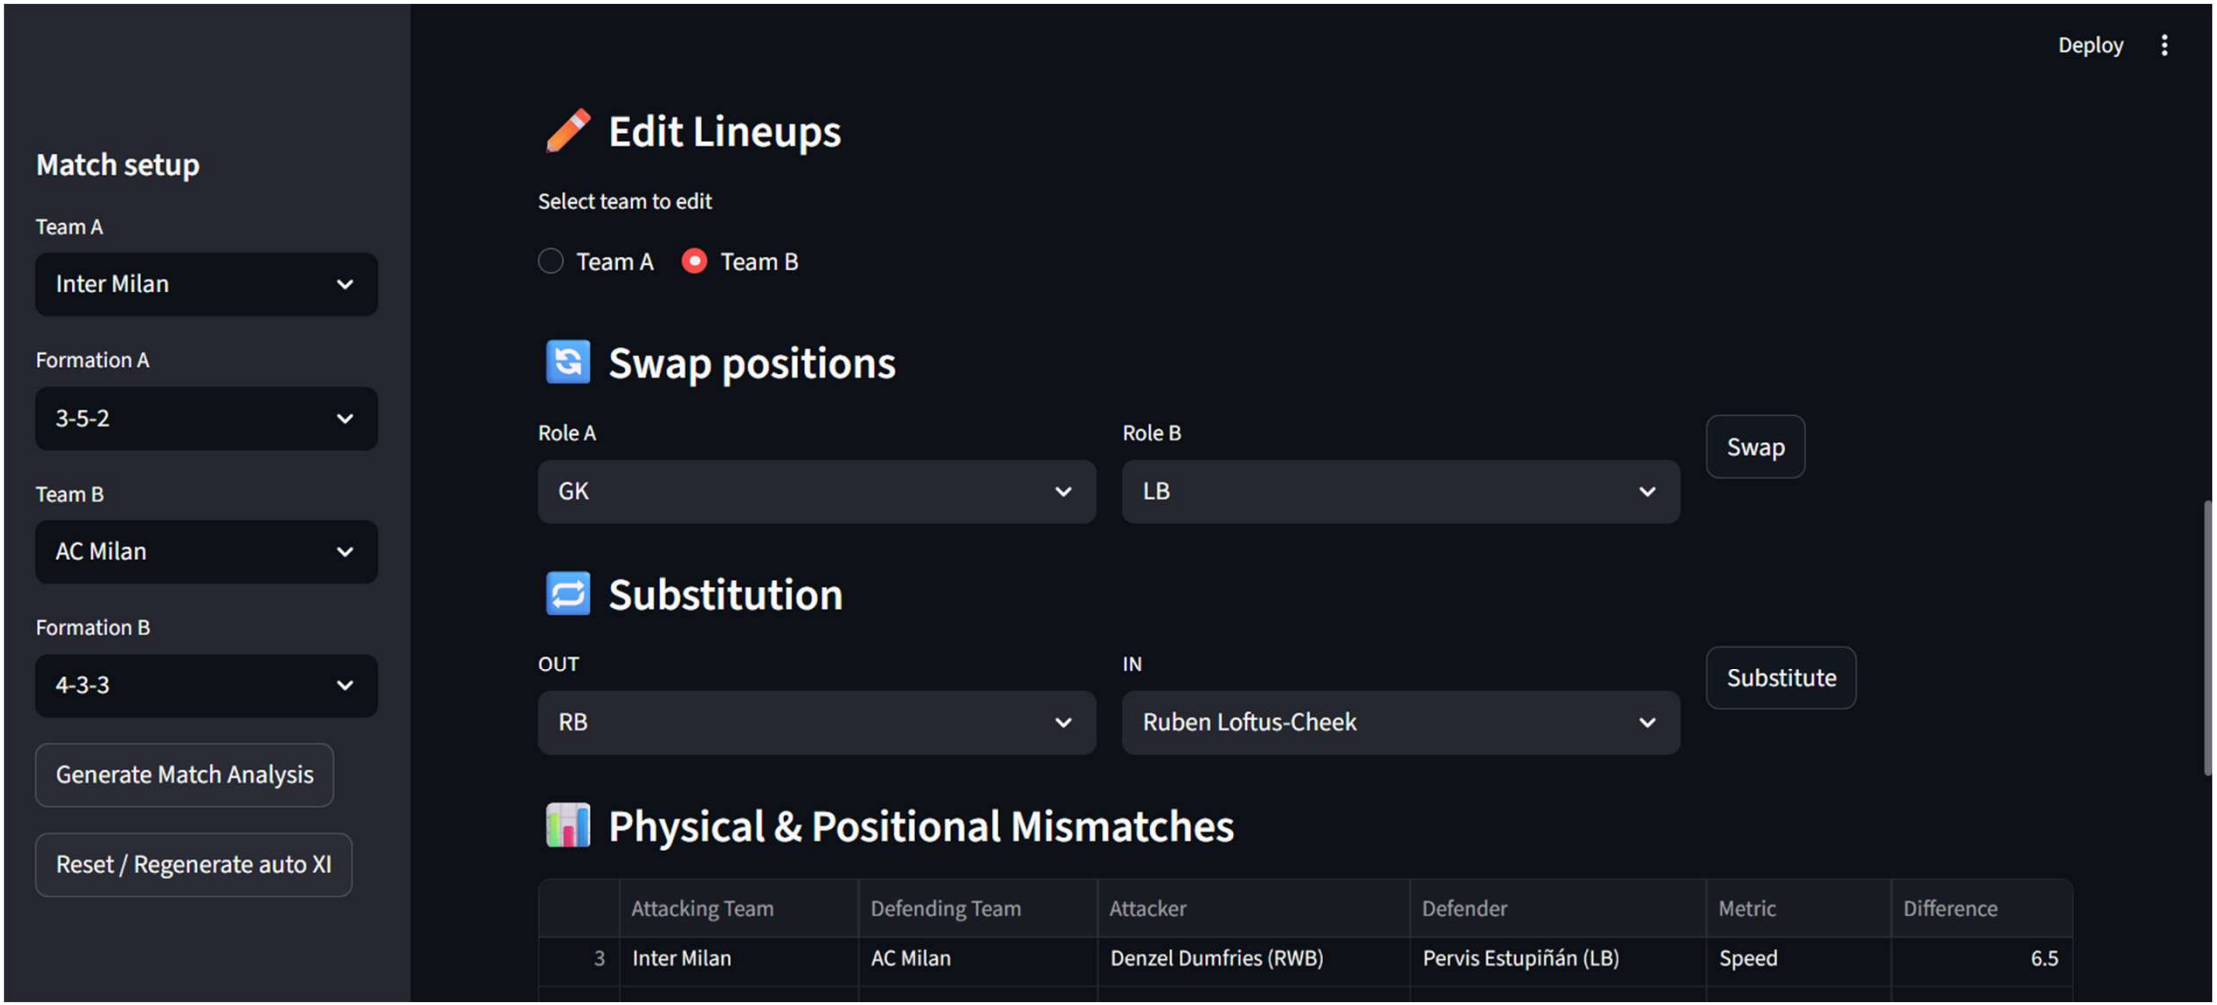


The user selects the desired team and tactical formation.

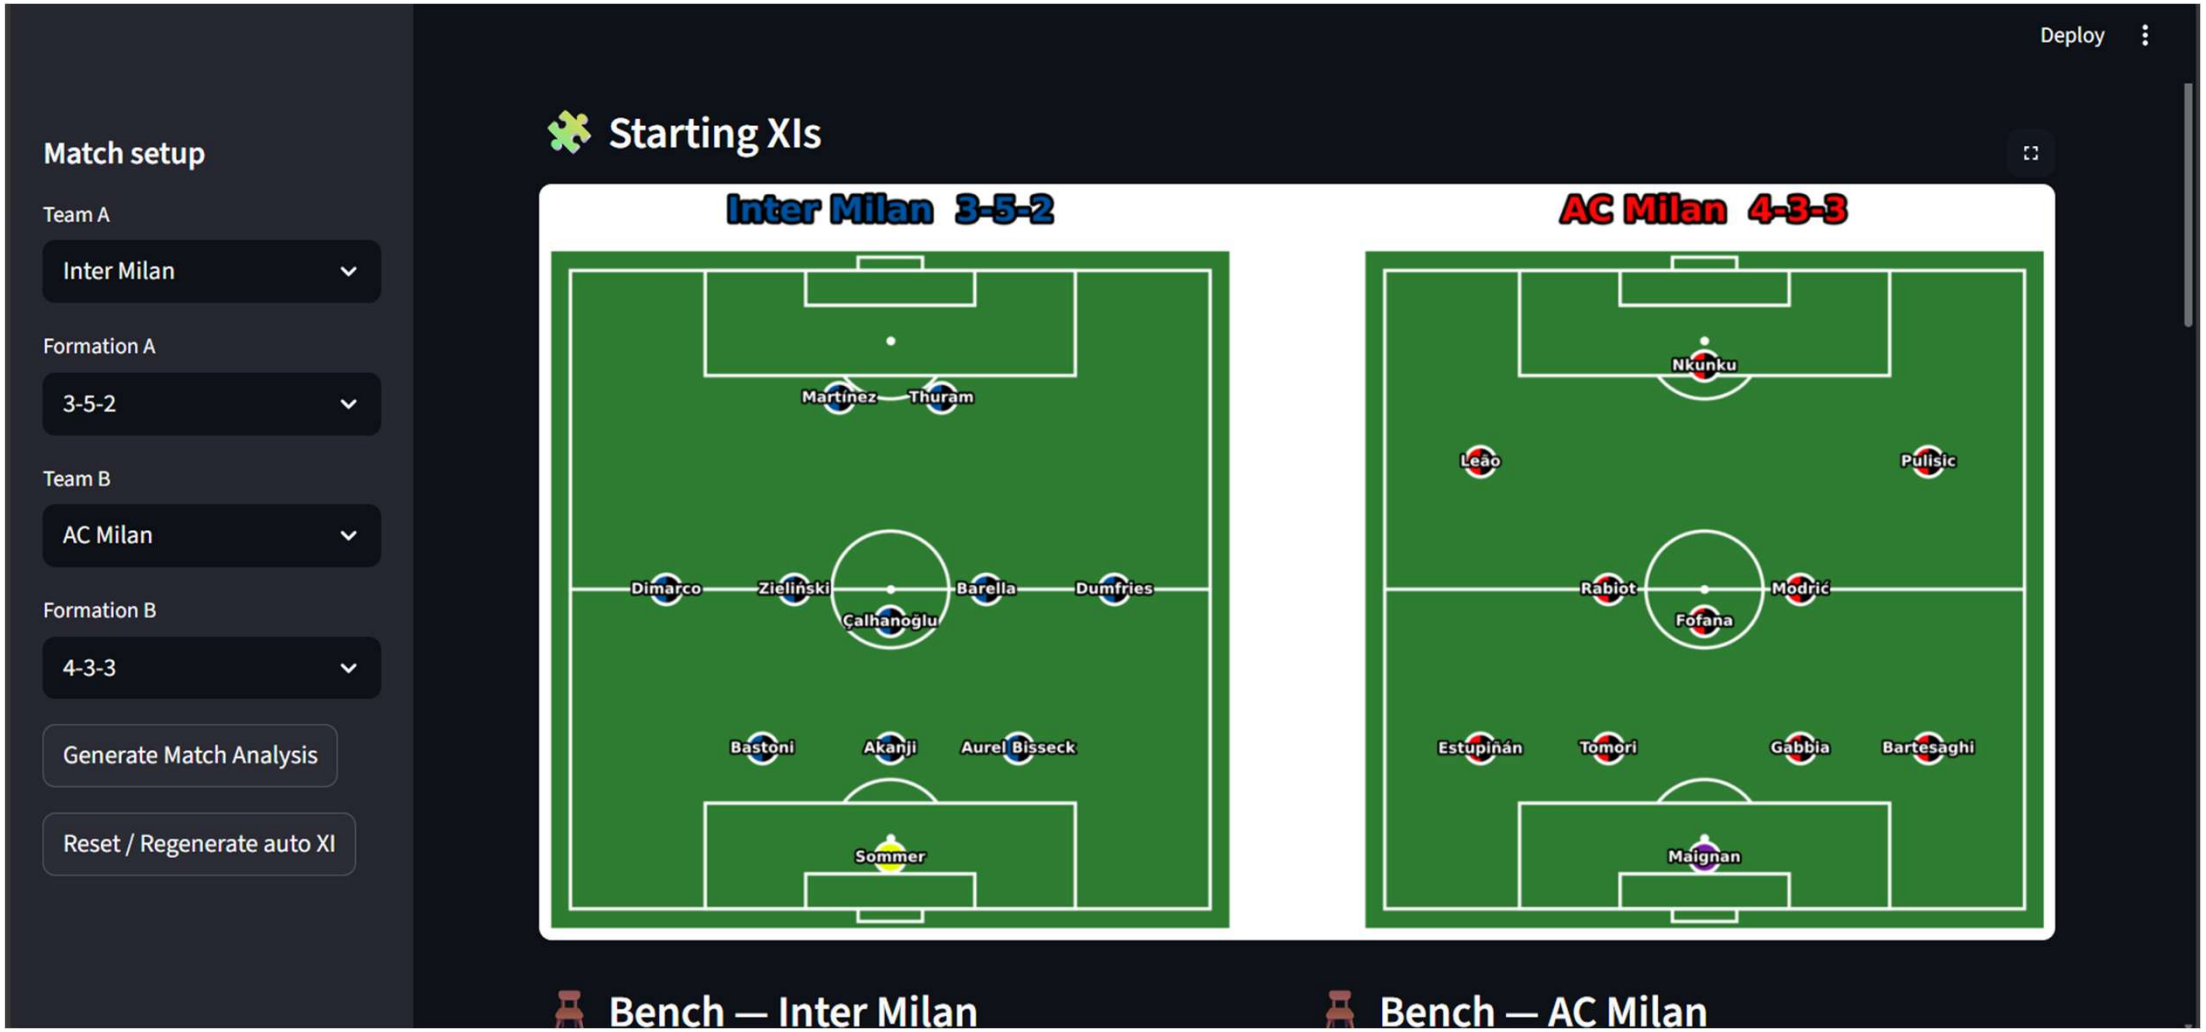
The displayed formation updates dynamically based on the user's selection.



The user can modify the lineup by swapping players or making substitutions if the default configuration is unsatisfactory.



The formation visualization updates accordingly to reflect the applied changes.



The system computes and highlights the most relevant on-field mismatches.

	Attacking Team	Defending Team	Attacker	Defender	Metric	Difference
0	Inter Milan	AC Milan	Federico Dimarco (LWB)	Davide Bartesaghi (RB)	Speed	26.5
1	Inter Milan	AC Milan	Federico Dimarco (LWB)	Davide Bartesaghi (RB)	Physicality	9
2	Inter Milan	AC Milan	Federico Dimarco (LWB)	Davide Bartesaghi (RB)	Balance	32
3	Inter Milan	AC Milan	Denzel Dumfries (RWB)	Pervis Estupiñán (LB)	Speed	6.5
4	Inter Milan	AC Milan	Denzel Dumfries (RWB)	Pervis Estupiñán (LB)	Aerial	13.5
5	Inter Milan	AC Milan	Denzel Dumfries (RWB)	Pervis Estupiñán (LB)	Physicality	13.5
6	Inter Milan	AC Milan	Denzel Dumfries (RWB)	Pervis Estupiñán (LB)	Balance	-9
7	Inter Milan	AC Milan	Lautaro Martínez (LST)	Fikayo Tomori (LCB)	Balance	17
8	Inter Milan	AC Milan	Lautaro Martínez (LST)	Matteo Gabbia (RCB)	Speed	33.5
9	Inter Milan	AC Milan	Lautaro Martínez (LST)	Matteo Gabbia (RCB)	Physicality	7

The AI coach proposes a tactical plan based on the identified mismatches to counter the opposing team.

Talk with the AI Coach

Coach:

1. Attacking Strategy

The 2-3 most important positive mismatches for Team A are:

- Federico Dimarco (LWB) vs Davide Bartesaghi (RB): This mismatch occurs on the left flank. Dimarco's advantages in speed, physicality, and balance can be exploited by attacking down the left side, using Dimarco's pace to beat Bartesaghi and deliver crosses into the box.
- Lautaro Martínez (LST) vs Matteo Gabbia (RCB): This mismatch occurs in the central defensive area. Martínez's speed advantage over Gabbia can be exploited by playing long balls over the top for Martínez to chase, potentially getting in behind the AC Milan defense.
- Lautaro Martínez (LST) vs Fikayo Tomori (LCB): This mismatch occurs in the central defensive area. Martínez's balance advantage over Tomori can be exploited by playing balls into Martínez's feet, allowing him to turn and shoot or create opportunities for his teammates.

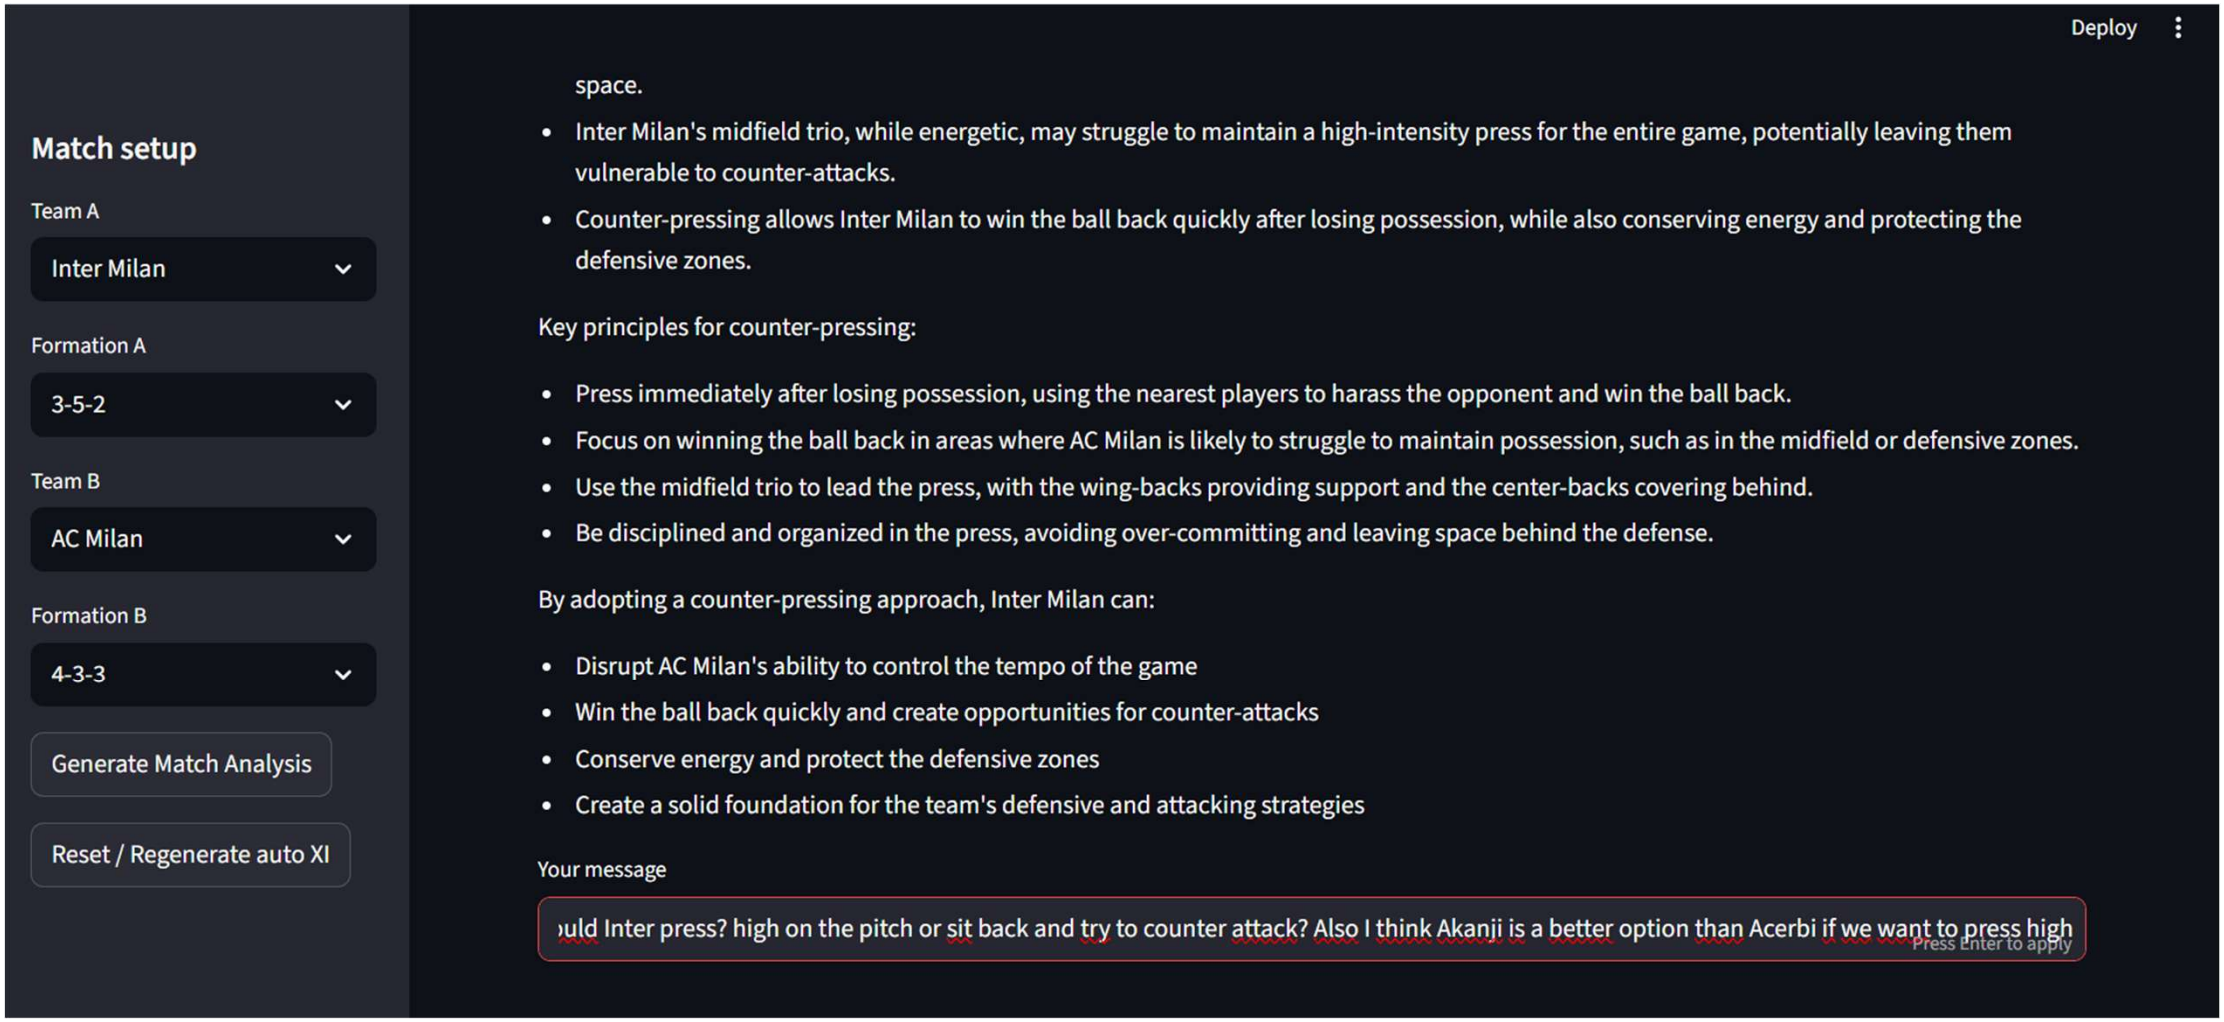
2. Defensive & Rest-Defense Strategy

The main risks for Team A when attacking are:

- Leaving space behind the defense for AC Milan's quick attackers, such as Rafael Leão and Christian Pulisic, to exploit.
- Allowing Adrien Rabiot and Luka Modrić to control the tempo of the game and create opportunities for AC Milan.

To mitigate these risks, Team A should:

The user can interact with the AI coach to propose new ideas or ask follow-up questions.



The user iteratively engages with the AI coach until a satisfactory and realistic tactical solution is reached.

You: How should Inter press? high on the pitch or sit back and try to counter attack? Also I think Akanji is a better option than Acerbi if we want to press high

Coach:

Pressing Strategy

Given the personnel and the opposition, it's recommended that Inter Milan adopt a **mid-block press** rather than a high-intensity press or a deep-lying defense. This approach would allow Inter to:

- Press AC Milan's midfielders, such as Adrien Rabiot and Luka Modrić, in the middle third of the pitch, disrupting their ability to control the tempo of the game.
- Use the energy and aggression of Nicolò Barella and Hakan Çalhanoğlu to win the ball back quickly and create opportunities for counter-attacks.
- Protect the defensive zones by having the center-backs, particularly Manuel Akanji, step up to press the opponent and win the ball back, rather than sitting deep and inviting pressure.

You are correct that Manuel Akanji is a better option than Francesco Acerbi if Inter wants to press high. Akanji's higher overall rating and mobility make him better suited to a high-intensity press, whereas Acerbi's strengths lie more in his defensive solidity and experience.

Key principles for the mid-block press:

- Press AC Milan's midfielders in the middle third of the pitch, using the midfield trio to lead the press.
- Use Akanji's mobility and aggression to step up and press the opponent, winning the ball back and creating opportunities for counter-attacks.

The AI coach adapts the tactical plan in response to the user's suggestions and modifications.
